

NKT Technologies Successfully Completes ISO-9001/ISO-14001 Recertification Audit

SAN JOSE, CA - NK Technologies announces it has successfully completed an ISO-9001/ISO-14001 recertification audit of its quality assurance and environmental management systems. The systems have been consolidated in order to provide for efficiencies in managing both systems collectively versus separately. The four day audit was performed by SGS, an ANAB accredited independent third party registrar.

Previously each management system had been audited independently as the initial ISO-9001 and ISO-14001 registrations were achieved at different points in time, 14 months apart. Ron Rapczynski, NK Technologies Quality Assurance and Environmental Systems Manager says: "The consolidation of both systems has reduced each systems maintenance and operating costs. More importantly however it has increased the effectiveness of each system. This translates to the company continuing to provide the highest quality products while being good stewards of the environment."

NK Technologies offers an industry leading five year warranty in order to demonstrate the confidence it has in the design and manufacture of its products.
